

Copyright

The circuit topologies that I have used here are well known and have been around for 20 or 30 years and in many cases considerably longer. As such I am not claiming any copyright or patent on the circuit topologies used here.

What I have done which is new here, is to group these circuits together and make them function in LTspice, Qspice, etc..

The purpose of this website is so that you can download these circuits and run them in the relevant simulator in order to see the waveforms throughout the particular circuit and better understand the operation of the circuit.

If anyone does decide to republish sections of this website, crediting this website as the source would be appreciated.

You could of course always just refer to this website (analogsimulation.co.uk) rather than republishing anything.

Do not falsely pretend to be the original author of these functioning spice circuits.
